Nephroptosis. Initial manifestations of pathology in compensation state.

Changes in liver stroma. Decrease of detoxicative function.

Chronic colitis.

Predisposition to allergic reactions.

Vertebral osteoarthrosis.

Metabolism is disturbed. Intoxication.

#### MIXED SUBTYPE WITH THE SIGNS OF CHOLESTEROSIS.

This subtype's peculiarity is predisposition to metabolic disturbances (primarily of cholesterol) and decreased reactivity of lymphoid tissue.

Stable hypertension, development of chronic ischemic heart disease and encephalopathy are typical.
